

1350 Sensor Programmer

The Sensor programmer (SP) is a hand-held device used to program all of Norscan's field programmable sensors. The SP is a user-friendly terminal that automatically detects sensor type for programming. The user inputs only the code and baud rate to program the sensor. The terminal is housed in a field rugged case and is stored in a protective nylon padded pouch.

Features

- Compatible with all of Norscan's field programmable sensors
- Powered by 'AA' cell alkaline batteries for easy field replacement
- Automatic "shut off" for extending battery life
- LCD display has contrast level adjustment and backlighting for poor viewing conditions
- Storage pouch includes belt loop for convenient and close storage
